

BIOSYNC CLINICAL LABORATORY REPORT — URGENT

Patient: Sarah Ayres (DOB: 11/08/2000) | **Date:** April 19, 2026

Vital Signs & Biometric Readings

Heart Rate	158 BPM
Blood Pressure	182/122 mmHg
SpO2	86%
Temperature	103°F
Glucose	318 mg/dL
Weight	265 lbs
BMI	42.8
HRV	18 ms

Clinical Notes

Patient presents via urgent care with chest tightness, dizziness, and confusion. Non-smoker. Occasional drinker. No current medications. No prior surgeries. Heart rate critically elevated at 158 BPM. Patient reports palpitations and dizziness. Immediate evaluation for arrhythmia indicated. Blood pressure of 182/122 mmHg meets threshold for hypertensive crisis. Immediate intervention required. Emergency protocol initiated. Oxygen saturation at 86% is critically low. Supplemental oxygen administered. Respiratory status being monitored. Temperature at 103°F indicates high fever. Sepsis workup ordered. Glucose at 318 mg/dL is critically high. Patient denied prior diabetes diagnosis. Insulin protocol initiated. HbA1c ordered. HRV at 18 ms is severely depressed indicating significant autonomic stress consistent with acute medical emergency.

Provider Notes

Patient admitted for emergency observation. Cardiology and endocrinology consulted. IV antihypertensive initiated. Continuous cardiac monitoring in place. Family notified. Patient stable

but critical. Family history of hypertension and diabetes on both maternal and paternal sides significantly elevates risk. Ordering Provider: Dr. James Henderson, MD — URGENT. Facility: BioSync Clinical Health Center — Emergency Dept
