

BIOSYNC CLINICAL LABORATORY REPORT

Patient: Harold J. Kowalski (DOB: 11/30/1955) | Date: March 31, 2026

Vital Signs & Biometric Readings

Heart Rate	92 BPM
Blood Pressure	152/98 mmHg
SpO2	93%
Temperature	98.8°F
Glucose	188 mg/dL
Weight	203 lbs
BMI	29.1
HRV	28 ms

Clinical Notes

Patient presents with return of ankle swelling, significant right foot pain and swelling consistent with gout flare, and increased dyspnea. Shellfish allergy — not administered. Currently on Metoprolol 50mg, Atorvastatin 40mg, Metformin 1000mg twice daily, Omeprazole 20mg, Allopurinol 100mg, Aspirin 81mg. Heart rate 92 BPM — elevated, likely pain-related. Blood pressure 152/98 mmHg — Stage 2 hypertension returning despite Metoprolol uptitration. SpO2 93% — concerning, supplemental oxygen applied in clinic. Glucose 188 mg/dL significantly elevated — patient admits stress eating. Weight up 6 lbs since February — fluid retention recurring. Gout flare confirmed — right first MTP joint erythematous and warm. Cannot take NSAIDs due to cardiac risk and Aspirin interaction. HRV 28 ms — severely depressed.

Provider Notes

Multiple concurrent issues: gout flare, cardiac decompensation, and hypertension spike. Furosemide restarted at 40mg. Colchicine 0.6mg twice daily for gout (NSAID-free). Allopurinol increased to 200mg. Amlodipine 5mg added for blood pressure control. Patient strictly instructed: if weight increases 2+ lbs overnight or chest pain develops, go to emergency immediately. Endocrinology adjusting Metformin — dose increase pending. Repeat echo expedited. Dietary and fluid restriction counseling repeated. Recheck in 2 weeks. Ordering Provider: Dr. Thomas Brewer, MD — Cardiology. Facility: BioSync Clinical Health Center
