

BIOSYNC CLINICAL LABORATORY REPORT

Patient: Jordan Riley (DOB: 04/11/2003) | Date: February 17, 2026

Vital Signs & Biometric Readings

Heart Rate	78 BPM
Blood Pressure	116/74 mmHg
SpO2	97%
Temperature	98.7°F
Glucose	91 mg/dL
Weight	126 lbs
BMI	21.0
HRV	57 ms

Clinical Notes

Patient presents for flare follow-up. Significant improvement reported since January visit. Joint pain reduced to mild. Butterfly rash fading. Fatigue improved. Currently on Hydroxychloroquine 200mg twice daily, Methotrexate 15mg weekly, Prednisone tapering (now 10mg daily), Folic Acid 1mg, Sertraline 50mg, Ferrous Sulfate 325mg. Heart rate 78 BPM — returned to near baseline. Blood pressure 116/74 mmHg — normal and improved. SpO2 97% excellent — no respiratory concerns. Temperature 98.7°F normal — fever fully resolved. Weight 126 lbs — appetite returning. HRV 57 ms improved significantly from flare state. Anxiety stable on Sertraline. Lab results from January: anti-dsDNA elevated confirming flare, now trending down.

Provider Notes

Flare resolving well on increased Prednisone. Continue taper — reduce to 7.5mg next week, then return to 5mg maintenance in 2 weeks if symptoms remain controlled. Methotrexate dose held at 15mg — adequate response. Repeat anti-dsDNA in 6 weeks. Ophthalmology screening for Hydroxychloroquine scheduled. Continue iron supplementation — recheck ferritin next visit. Patient counseled on stress reduction and sleep hygiene. Follow-up in 6 weeks. Ordering Provider: Dr. Sandra Okeke, MD — Rheumatology. Facility: BioSync Clinical Health Center
