

BIOSYNC CLINICAL LABORATORY REPORT

Patient: Nina Vasquez (DOB: 07/03/1998) | Date: February 19, 2026

Vital Signs & Biometric Readings

Heart Rate	79 BPM
Blood Pressure	112/70 mmHg
SpO2	94%
Temperature	98.3°F
Glucose	122 mg/dL
Weight	107 lbs
BMI	19.5
HRV	54 ms

Clinical Notes

Patient presents post-exacerbation follow-up. Cough significantly reduced. Sputum color returned to white-clear. Energy improving. Appetite recovering. Currently on Orkambi 200/125mg twice daily, Albuterol nebulizer PRN, Creon 12,000 units with meals, Azithromycin 500mg 3x/week, Vitamin ADEK daily, Dornase alfa daily (IV antibiotics course complete). Heart rate 79 BPM — returned to baseline. Blood pressure 112/70 mmHg — normal. SpO2 94% — improving, close to CF baseline. Temperature normal — infection resolved. Glucose 122 mg/dL — improving, insulin sliding scale discontinued. Weight 107 lbs — recovering, up 2 lbs. HRV 54 ms — significant improvement. FEV1 58% predicted — partially recovered from exacerbation nadir, not yet at pre-exacerbation baseline of 62%.

Provider Notes

Recovery from pulmonary exacerbation progressing well. IV antibiotics course completed successfully. Restart baseline regimen. FEV1 not yet fully recovered — monitor at next visit. CFRD: glucose improving off insulin — continue dietary management and HbA1c recheck in 8 weeks. Weight gain encouraged — high calorie supplementation to continue. Annual PFTs rescheduled for March. Sputum culture sent — results pending. Port-a-cath assessed and de-accessed. Patient reminded of early exacerbation warning signs. Follow-up in 6 weeks. Ordering Provider: Dr. Angela Holt, MD — Pulmonology/CF Center. Facility: BioSync Clinical Health Center
